

License-Compliant-Delivery Seminar

License-compliant delivery of products that contain open source software

Motivation

Product vendors that include open source software in their products need to fulfill the obligations put upon them by the licenses of the open source software code they are using. Otherwise, an immediate sales and distribution stop could be enforced.

This seminar provides a comprehensive introduction to license-compliant delivery (“distribution”) of products that contain open source software. It provides an integrative perspective that shows how the legal counsel, the engineering department, and the person or office tasked with managing open source work together best. It is therefore suitable for all main stakeholders.

Audience

Open source program officers, legal counsel, engineering managers, architects, developers

Speaker

Prof. Dr. Dirk Riehle, Bayave GmbH

Duration

A full work day (**8 hours**), either as one day, from **9am-5pm**, or as two consecutive half days, from **9am-12:30pm**

Structure

Four sessions of 90min each including coffee breaks and a lunch break

Language

The **seminar language** and all **seminar materials** are in **English**

More

For dates, locations, and registration, please see <https://bayave.com/training/lcd-seminar/>

1.

Open Source Licenses

- Intellectual property and licenses
- Free and open source software licenses
- Example licenses, types of licenses
- Copyleft obligation

2.

Software Product Risks

- Copyright risks
- Patent risks
- Software complexity
- Third-party code

3.

The Software Bill of Materials

- The license compliance workflow
- Structure and content of source code
- Source and binary code scanning
- Dependency analysis

4.

License-Compliant Distribution

- Standard license interpretation
- Creation of license compliance artifacts
- Bundling of license compliance artifacts
- Organization and presentation of bundle
