

License-Compliant Delivery Seminar

License-compliant delivery of products that contain open-source software

Motivation

Product vendors that include open-source software in their products need to fulfill the obligations put upon them by the licenses of the open-source code they are using. Otherwise, an immediate sales and distribution stop could be enforced.

This seminar provides a comprehensive introduction to license-compliant delivery (“distribution) of products or projects that contain open-source software. It provides an integrative perspective that shows how the legal counsel, the engineering department, and the person or office tasked with managing open source work together best. It is therefore suitable for all main stakeholders and provides effective workflows.

Audience

Open-source program officers, legal counsel, engineering managers, architects, developers

Speakers

Prof. Dr. Dirk Riehle, Dipl.-Ing. Theofanis Vassiliou-Gioles

Duration

A full work day (**8 hours**), either as one day, from **9am-5pm**, or as two consecutive half days, from **9am-12:30pm**

Structure

Four sessions of 90min each including coffee breaks and a lunch break

Language

The **seminar language** and all **seminar materials** are in **English**
